Description of the Website

1. Introduction

HUMAIN Fabric is a platform used by big organizations like banks and government agencies. Right now, when a new client starts using it, most of the communication happens through emails, phone calls, and meetings with an account manager. This takes time, and the client often does not know what is happening or what comes next. Our website solves this problem. It gives each client one place to log in and follow their whole journey with HUMAIN Fabric, from the first day until they are using it fully.

2. Our Goal

Our goal is to make the journey clearer and easier for the client, and to save time for the HUMAIN team by reducing back-and-forth emails and status calls.

3. Users:

- Client: a person from the company that uses HUMAIN Fabric. They can see their own information only.
- HUMAIN team: the staff who update the clients' progress and answer the clients' requests. They do this from a separate Admin Portal.

4. Main Features:

Stage	Feature	What the client sees
1	Getting started (onboarding)	A checklist of setup tasks, such as connecting data and setting access rules. The client can see what is done and what is left.
2	Setup progress	A progress bar that shows the percentage of setup that is finished. Both the client and the HUMAIN team can see it, so there is no need for status calls.

Stage	Feature	What the client sees
3	Dashboard	Simple charts that show which features the client uses and how much they use them.
4	Discover more (catalog)	A page where the client can look at other HUMAIN Fabric features and send a request with a "Request this" form, instead of sending an email.
5	Smart suggestions	Short messages based on the client's usage. For example, if usage is high, the website suggests an upgrade. These use simple rules on the usage data.

5. Pages

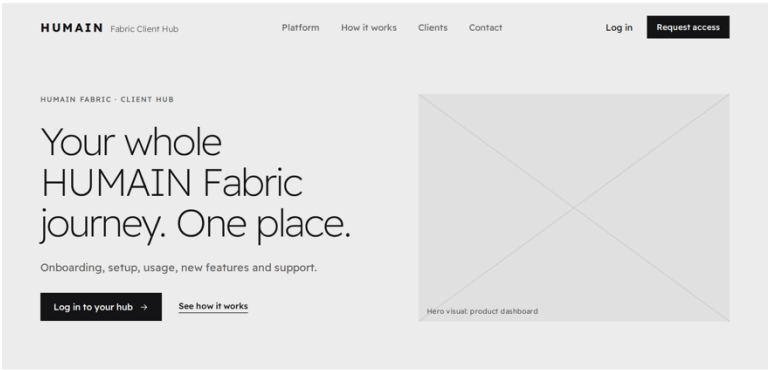

#	Page	Purpose
1	Home	Public landing page that explains the hub and leads to log in.
2	Log in / Request access	Log in for existing clients; request access for new organizations.
3	Overview (Dashboard)	Stage 3: usage numbers, charts and a table of features in use.
4	Getting started	Stages 1 and 2: onboarding checklist and setup progress bar.
5	Catalog	Stage 4: browse features the client does not have yet.
6	Feature details	One feature in detail, with the “Request this feature” form.
7	Smart suggestions	Stage 5: suggestions for upgrades, features and next steps.

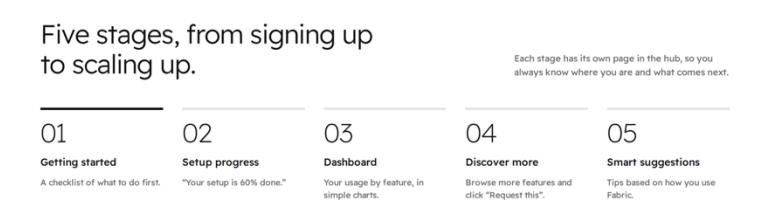

#	Page	Purpose
8	My requests	Status of every request the client has made.
9	Support	Messages with the account manager, tickets and FAQ.
10	Account settings	Organization details and team members.
11	Admin portal	For HUMAIN staff: clients overview and request queue.

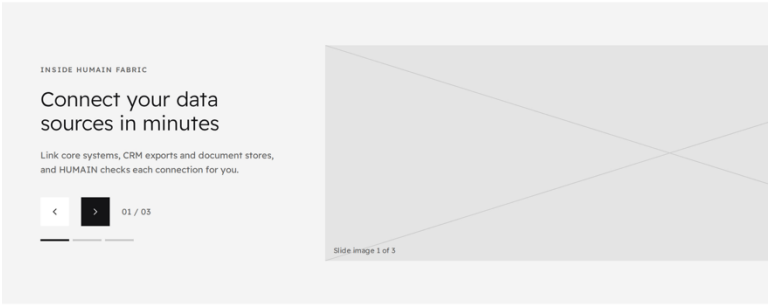

Wireframes

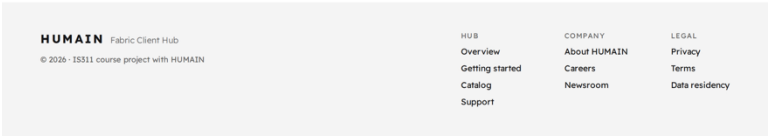

1. Home Page

A public landing page: a navigation bar, a jumbotron with the main message and log in button, the five stages, a carousel of what HUMAIN Fabric offers, and a footer.

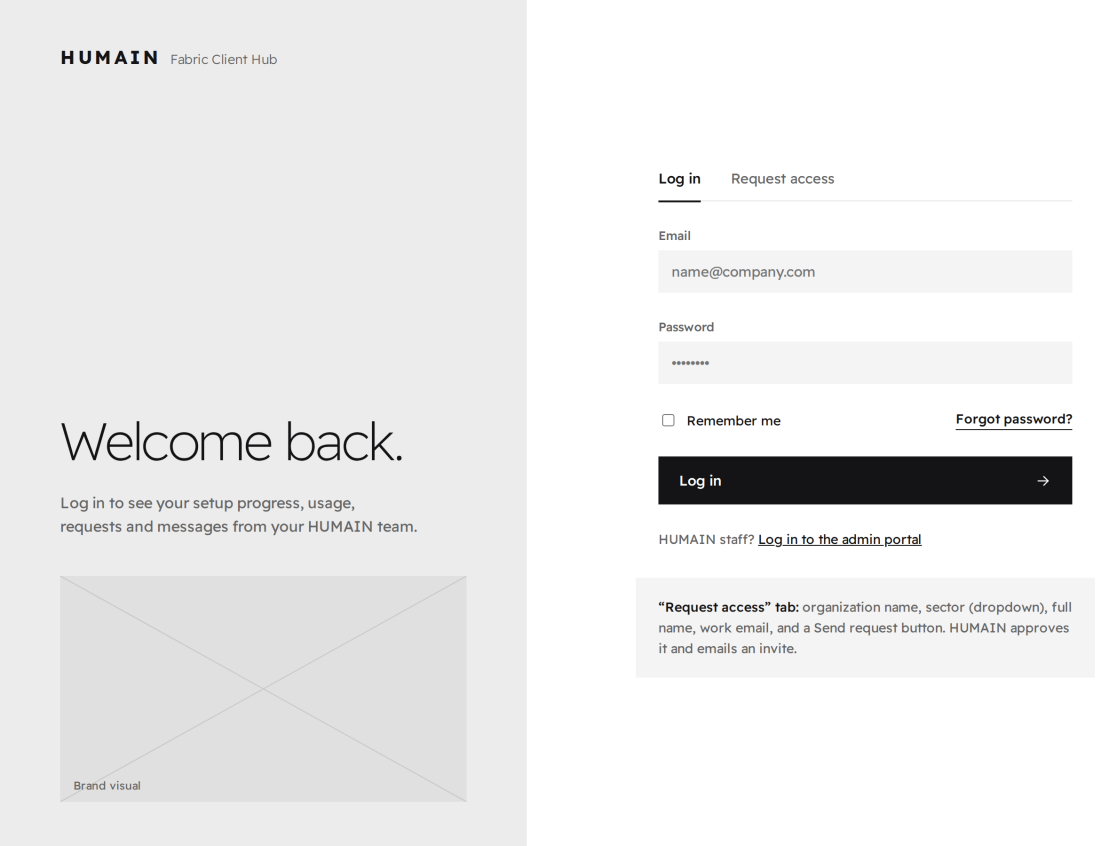

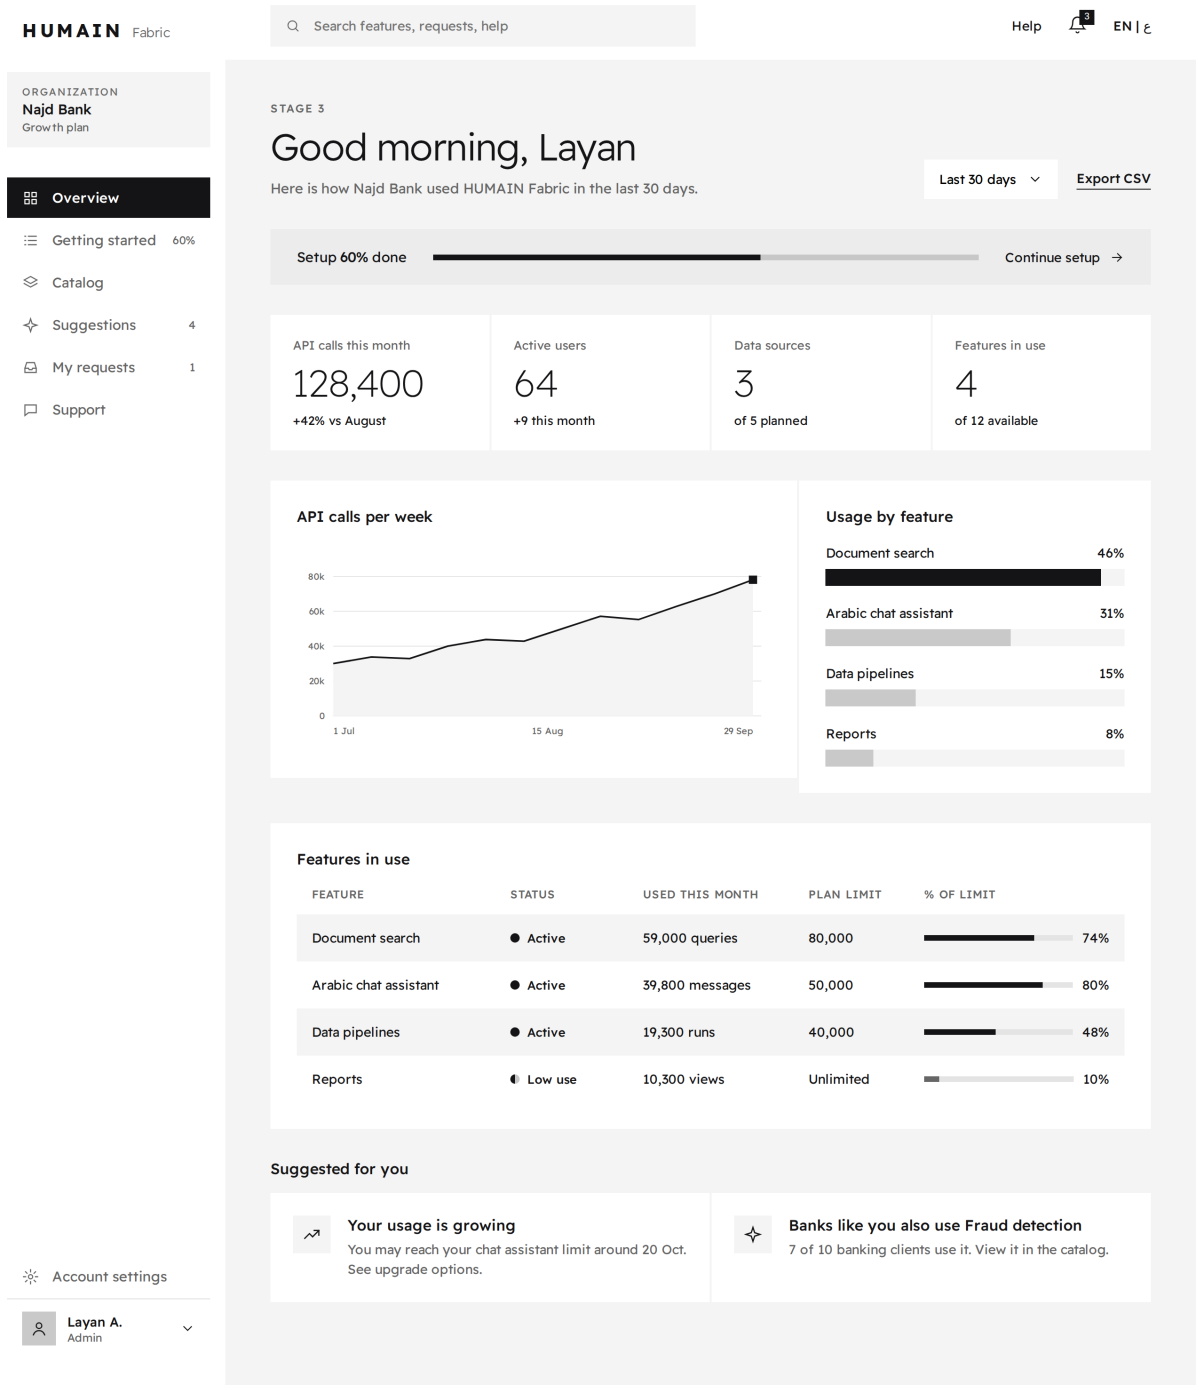

2. Log in / Request Access

A login form with two tabs: “Log in” for existing clients and “Request access” for new organizations. HUMAIN staff use the link to the admin portal.

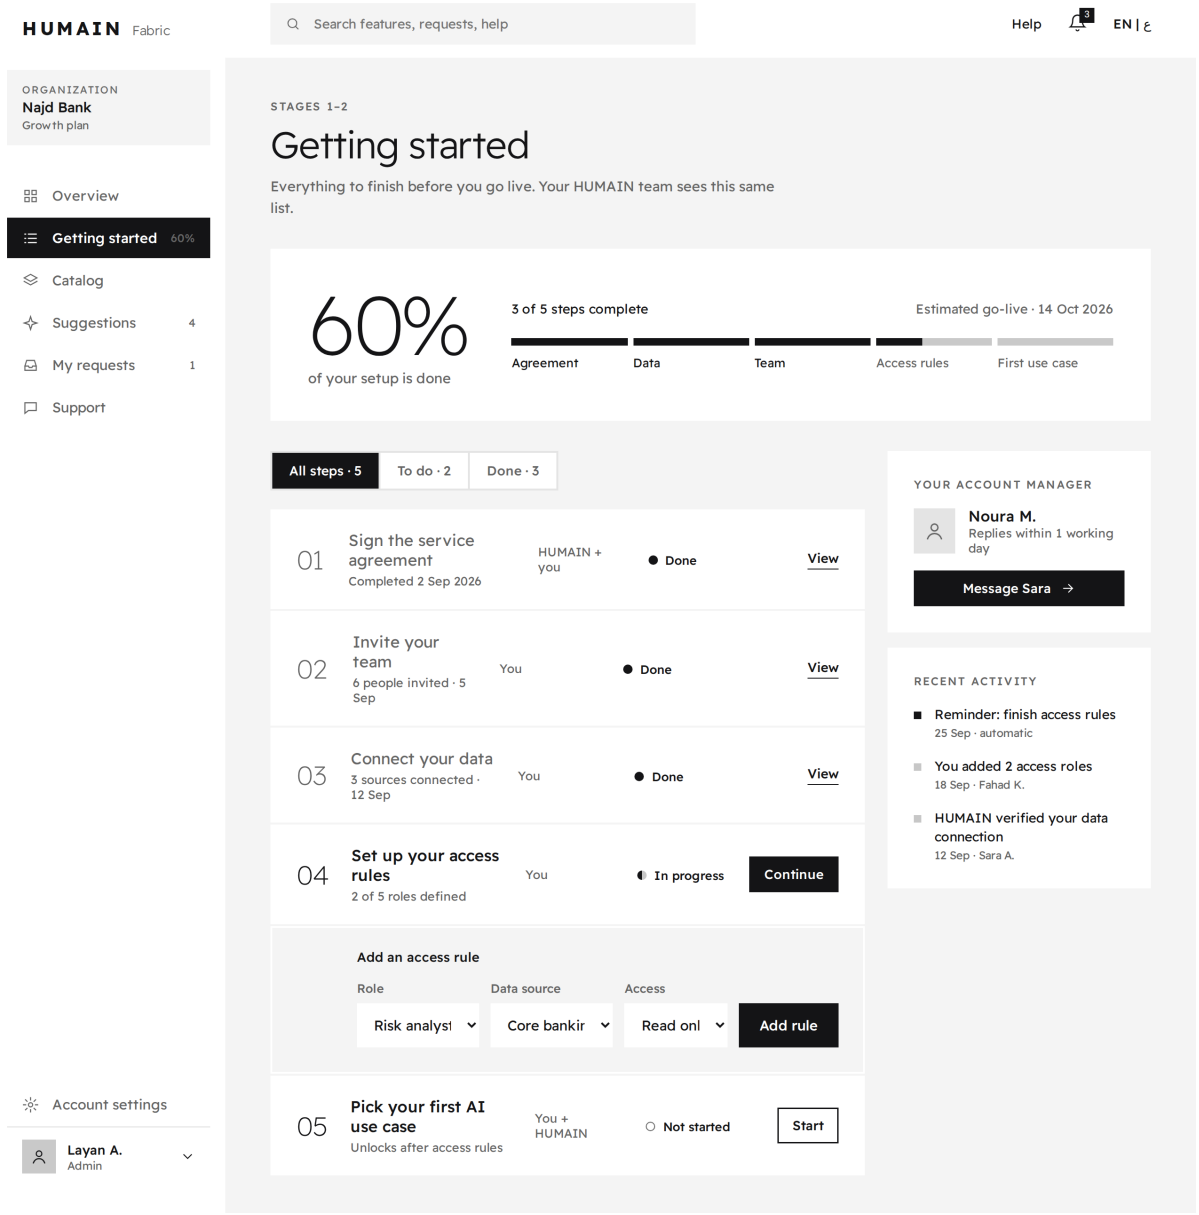

3. Overview Dashboard

After logging in, the client sees four key numbers, a line chart of usage over time, a bar chart of usage by feature, a table of features they're using and their top suggestions. A date range dropdown changes the period.

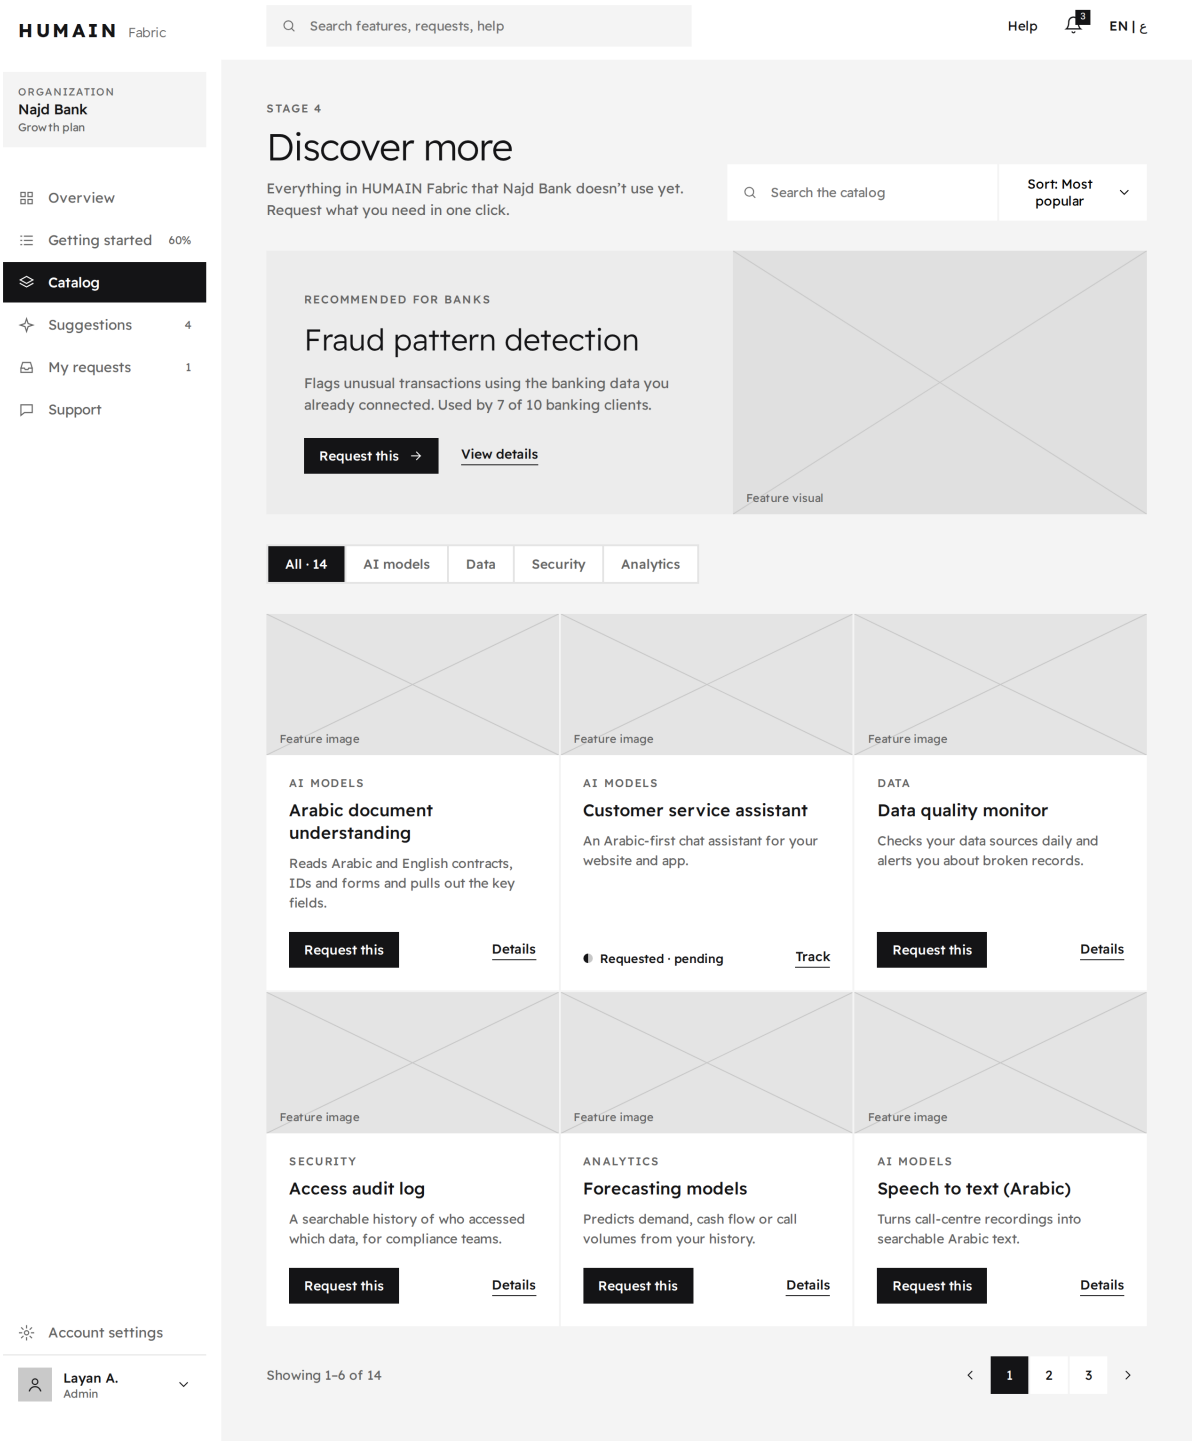

4. Getting Started Page

A progress bar above the onboarding checklist. Each step shows who is responsible and its status, and the current step opens a small form. The account manager's contact is on the right.

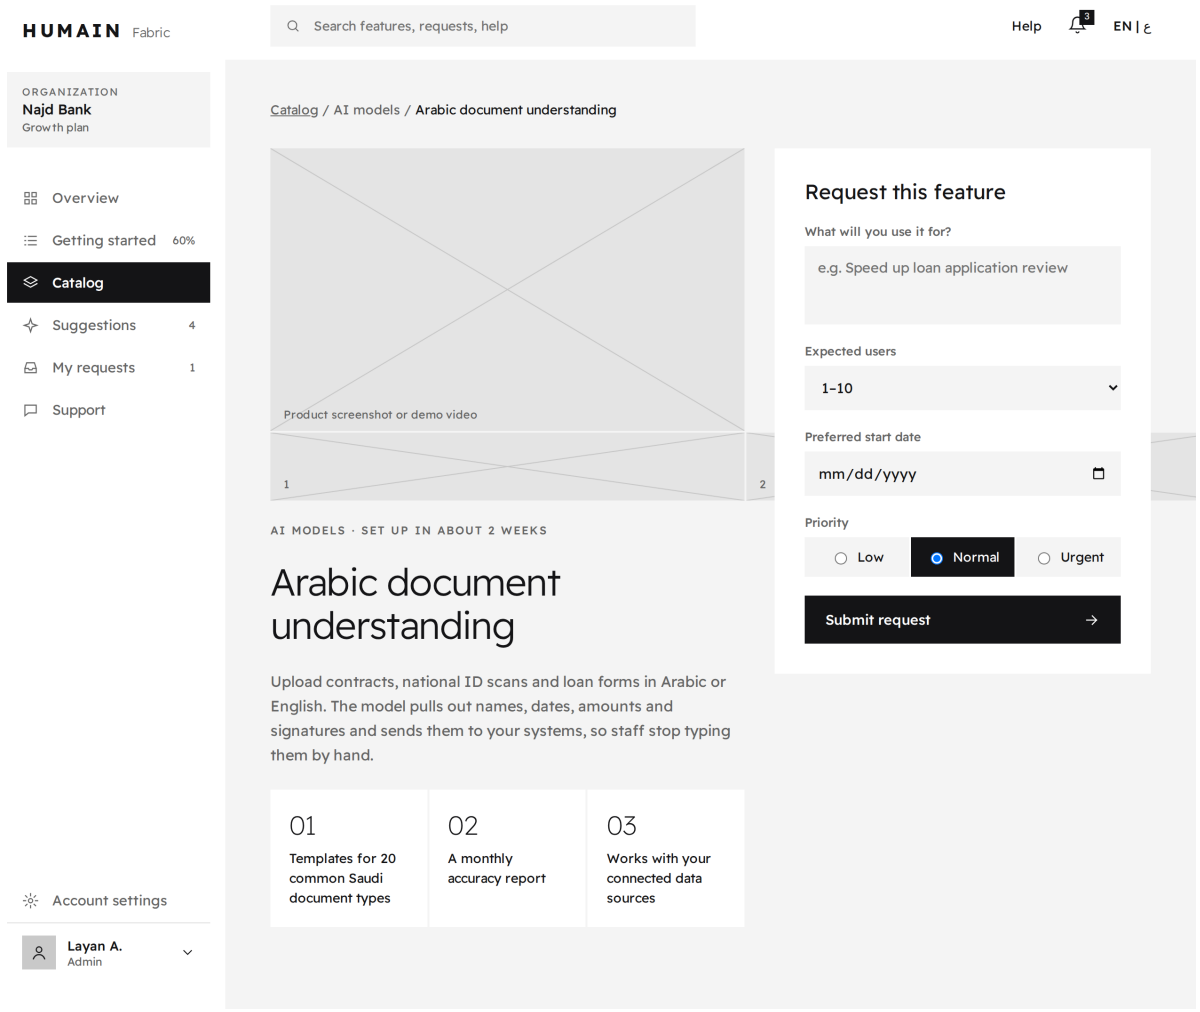

5. Catalog

A featured recommendation, category filters, a search box and sort dropdown, and a grid of feature cards, each with a “Request this” button. Pagination at the bottom too.

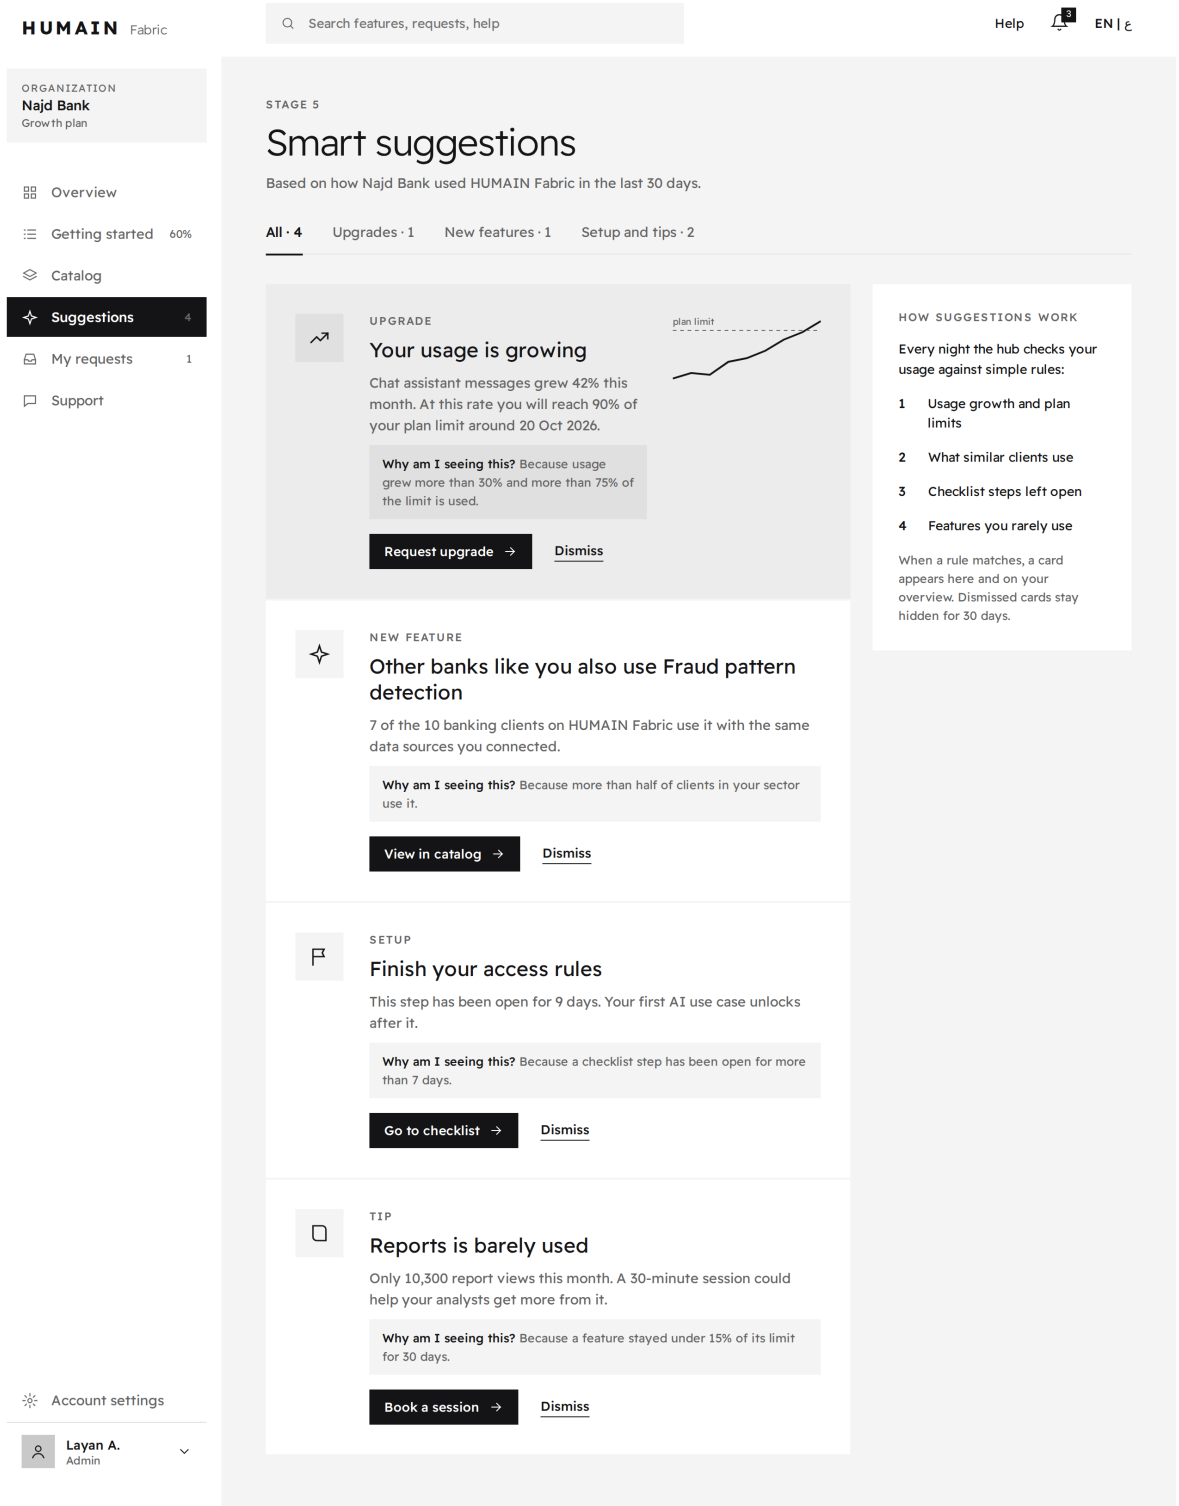

6. Feature Details

Images and a description of one feature, and the “Request this feature” form (use case, number of users, start date, priority). Submitting sends the request to HUMAIN.

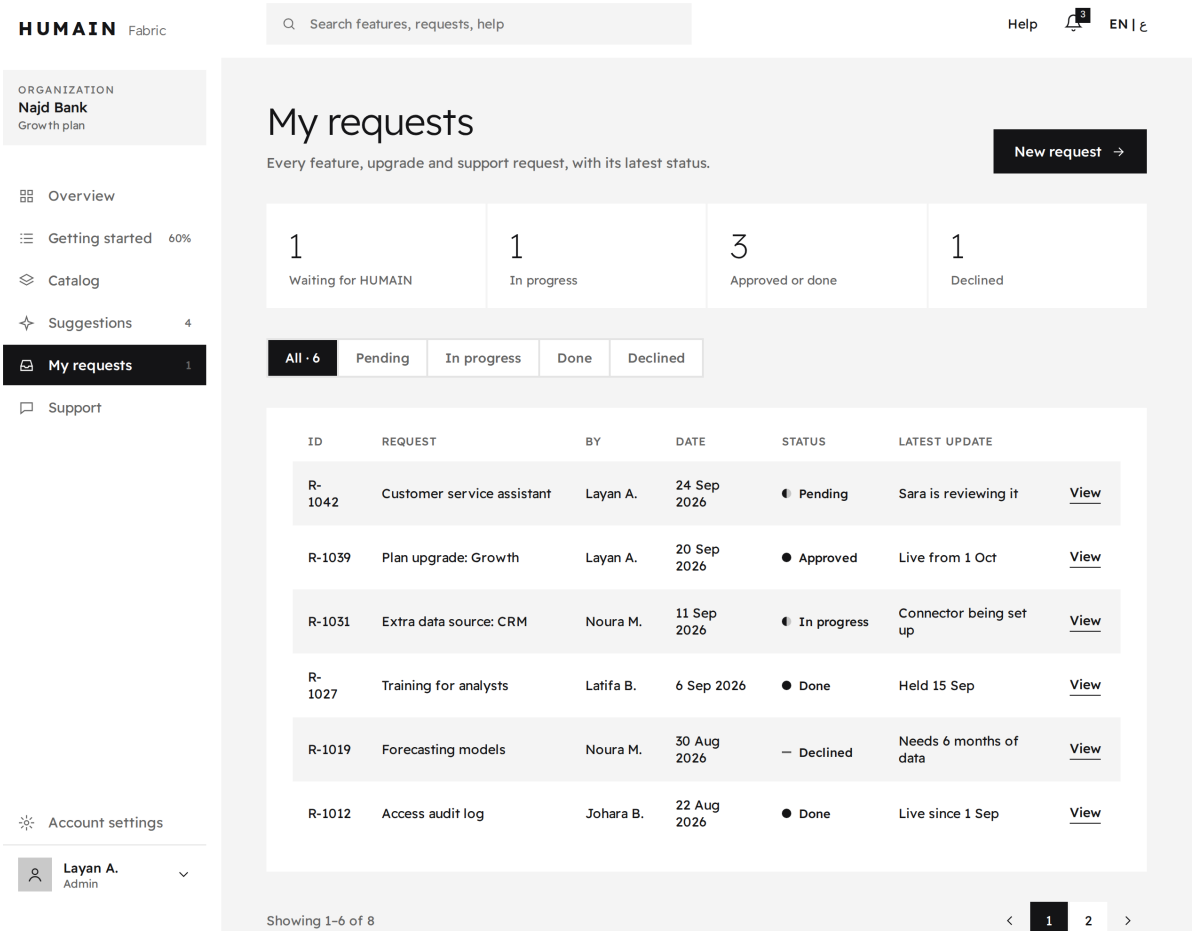

7. Smart Suggestions

Suggestion cards such as “Your usage is growing” and “Other banks like you also use…”. Each card explains why it appears and has an action and a Dismiss button.

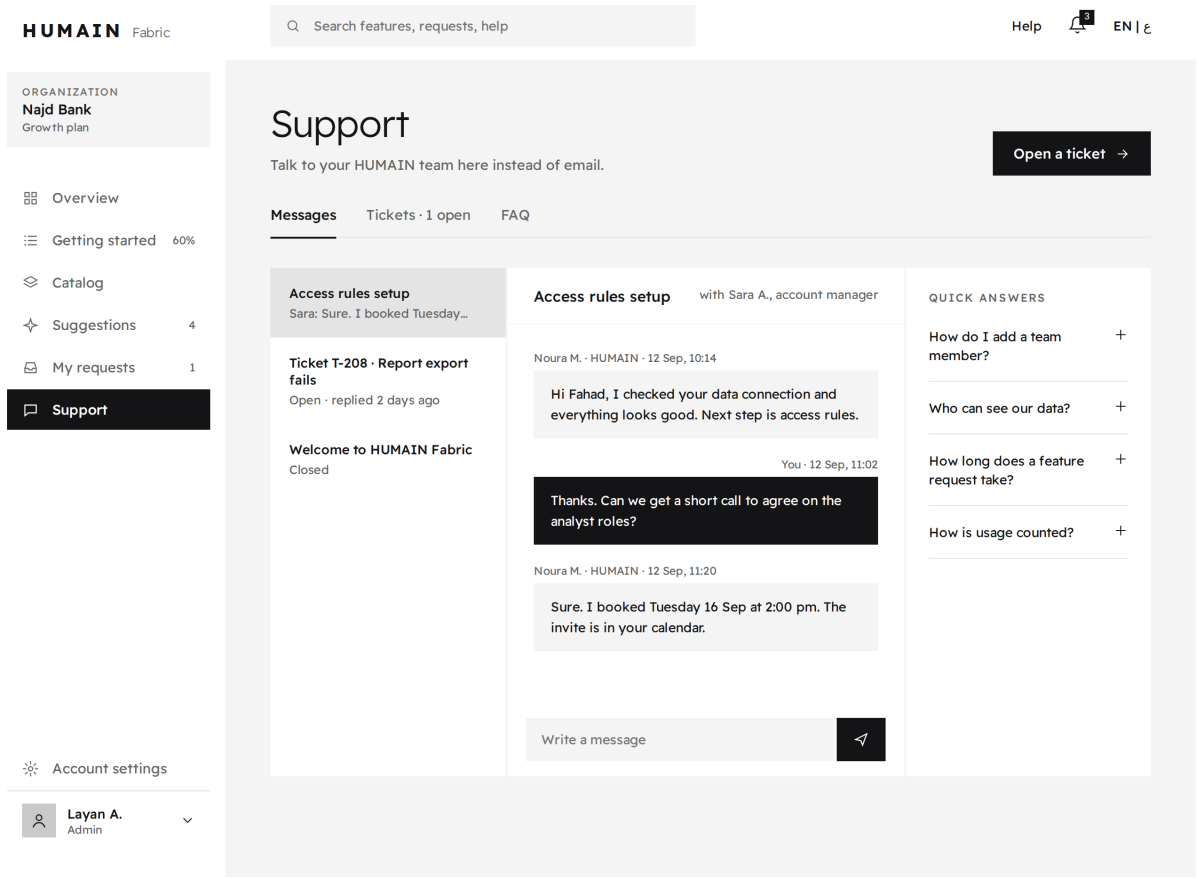

8. My Requests

A summary of requests by status, status filters, and a table of every request with its latest update. Pagination at the bottom.

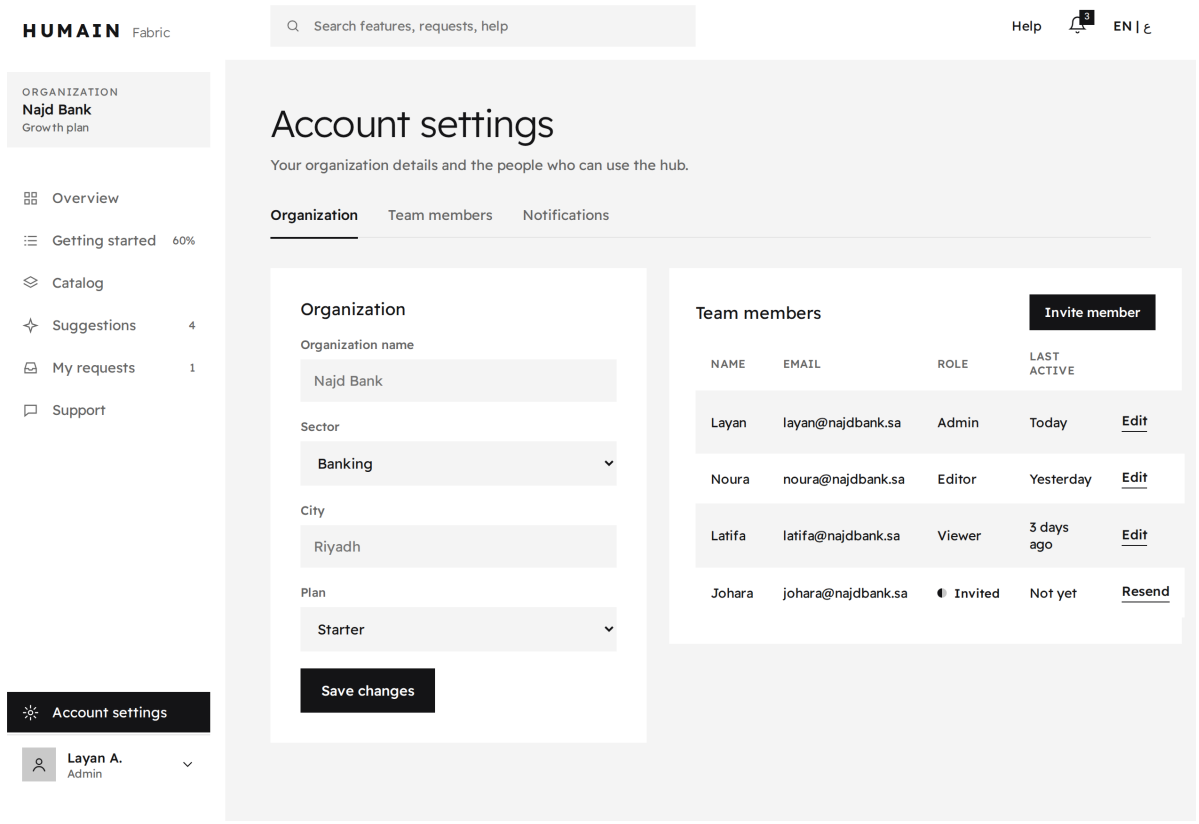

9. Support

Conversations with the HUMAIN account manager, a message box, tabs for tickets and FAQ, and a quick-answers list.

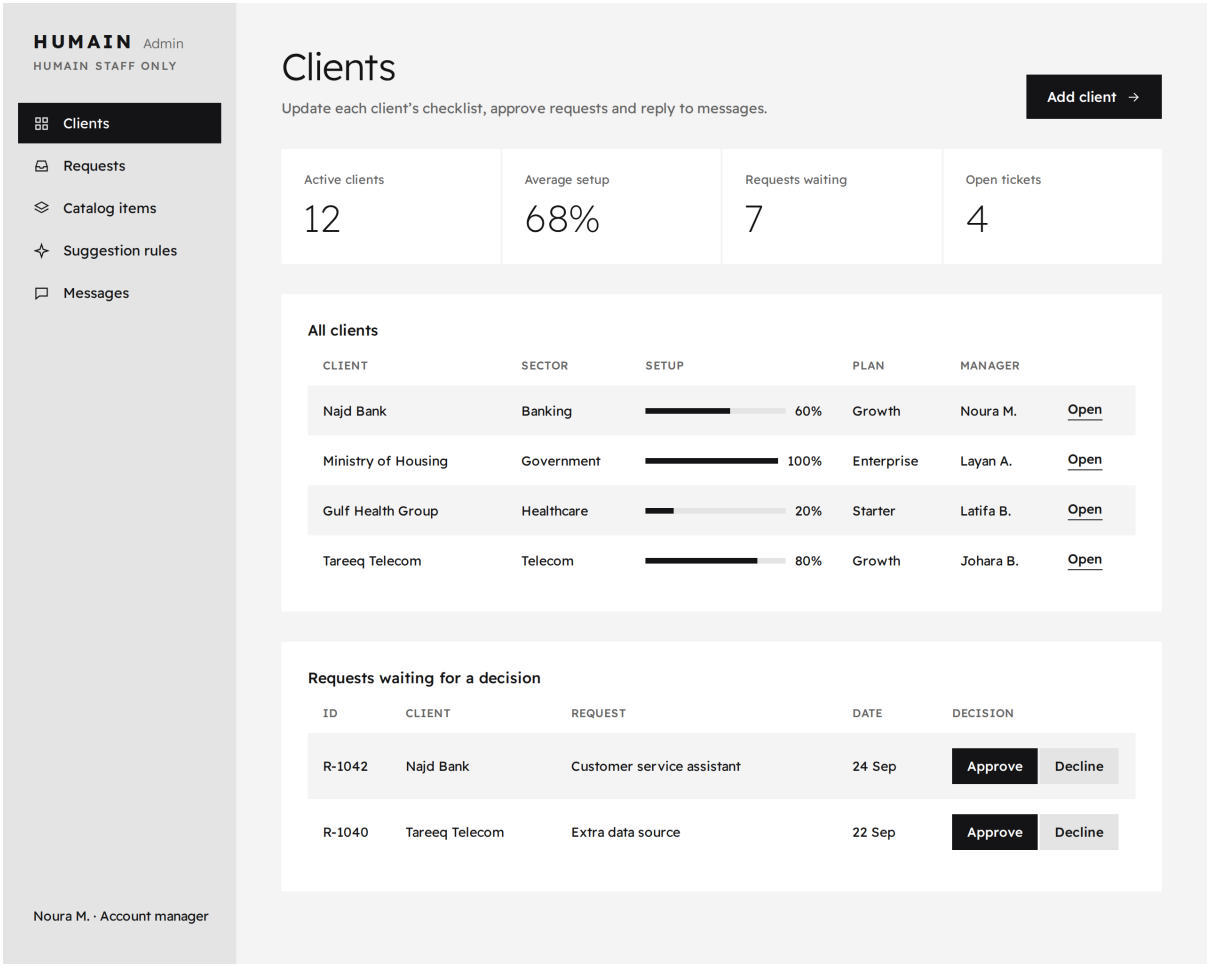

10. Account Settings

A form to update organization details and a table of team members with an invite button.

11. Admin Portal (for HUMAIN staff)

The staff view: key numbers, a table of all clients with their setup progress, and requests waiting for approval.

Sitemap

The sitemap shows the 11 pages and how they connect. Visitors start on the public Home page and log in. Clients then reach every hub page through the sidebar, and Feature details opens from the Catalog. HUMAIN staff log in to a separate admin portal.
